
JiraTech

Application Guide

How the application works, a description of every feature, and screenshots of every screen.

9 October 2026

JiraTech is a Jira-style application lifecycle management (ALM) platform. Teams use it to track work in projects (stories, tasks, defects, epics), move that work through configurable workflows, search it with JQL, plan it into program increments, and report on it.

On top of the standard Jira-style features, JiraTech supports the **SPORTS conventions**: a strict issue hierarchy, SPORTS-specific issue types (Feature/BAU/Release epics, release candidates, code/test/deployment sub-tasks), team and service component naming rules, RAG status, incident escalation and PI scheduling.

Screenshots in this guide were taken from a local instance loaded with the demo data (`npm run db:seed:demo`), logged in as `admin@jiratech.local` .

1. Architecture at a glance

Layer	Technology	Notes
Frontend	React, Vite, TypeScript, Tailwind CSS, TanStack Query	Single-page app on port 5173
Backend	NestJS (REST API under <code>/api</code>)	Port 3000
Database	Prisma ORM with SQLite (default) or PostgreSQL	Chosen by <code>DATABASE_URL</code> in <code>backend/.env</code>
Auth	JWT (bearer token, 7-day expiry by default)	Token stored in the browser
Email	SMTP, or <code>.eml</code> files in <code>backend/mail-outbox/</code> when no SMTP host is set	
PDF	jsPDF, generated in the browser	Used by Reports

Each backend module maps to a feature area: `auth` , `projects` , `issues` (incl. bulk), `workflow` , `search` (JQL), `board` , `comments/history/links` (in issues), `notifications` , `versions` , `components` , `labels` , `custom-fields` , `planning` , `scheduling` , `releases` , `incidents` , `dashboard` , `reports` , `users` , `access` (project permissions).

Project-scoped requests carry the current project in the `X-Project-Key` header, so every screen works on the project selected in the header.

2. Core concepts

Project — a container for issues, with a unique key (`PAY` , `MOB` , `SPORTS`). Issues are numbered `KEY-1` , `KEY-2` , ... Every project has its own versions, components, custom fields, workflow and members.

Project types

- *Standard* — free hierarchy and free component naming.
- *SPORTS conventions* — ticked at creation ("Enforce SPORTS conventions"). Stories, tasks and defects must sit under an epic, and components must follow the naming rules (team components start with `@` , service / release-train components use `ASSETID` (`serviceName`)).

Issue types and hierarchy

Level	Types
Epics (top level)	Epic, Feature Epic, BAU Epic, Release Epic
Level 2	Story, Defect, Task, Release Candidate
Sub-tasks	Analysis, Bug Fix, Code, Code Review, Arch Review, Code Merge, Documentation, Test Case, Test Run, Deployment, Configuration, Sub-task

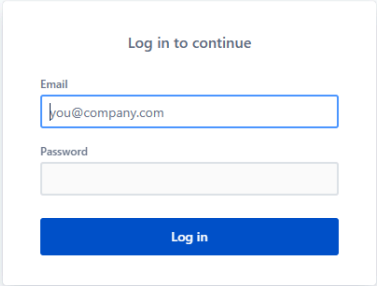

Parent rules are enforced by the server — for example, a *Release Candidate* can only sit under a *Release Epic*, *Code* only under a *Story*, and a *Defect* can sit under an epic or a story. A child issue is always created in its parent's project.

Statuses and categories — each project's workflow has its own statuses (e.g. *In Review*, *QA*), and every status belongs to one of four categories: **Backlog**, **To Do**, **In Progress**, **Done**. Dashboards, reports and the `statusCategory` JQL field use the category. New projects start with Backlog → To Do → In Progress → Closed.

Resolution — moving an issue into a Done status requires a resolution (*Done* or *Won't do*). Re-opening clears it.

Priority — Highest, High, Medium, Low, Lowest. For defects, the SPORTS rules derive priority from a severity × impact matrix.

3. Signing in

The image shows a login form for JiraTech. At the top, there is a JiraTech logo consisting of a blue diamond followed by the text "JiraTech". Below the logo, the text "Log in to continue" is centered. The form has two input fields: "Email" and "Password". The "Email" field contains the text "you@company.com". Below the "Password" field is a blue "Log in" button. At the bottom of the form, there is a small line of text: "Development accounts: admin@jiratech.local, dev@jiratech.local, qa@jiratech.local — see backend/prisma/seed.ts for the password."

Login

Sign in with email and password. A successful login stores a JWT in the browser; signing out (account menu) clears it. Accounts are created by an administrator on the **People** page — there is no self-registration.

Default administrator: `admin@jiratech.local` / `admin123`. Demo users (after `db:seed:demo`) share the same password, e.g. `elena@` (team lead), `nikos@` (developer), `sofia@` (QA), `daniel@` (release manager), `katerina@` (product owner).

4. The global header

Every page shares one header with:

Element	What it does
Logo	Back to the board
Project switcher	Shows the current project; switches project, links to all projects or <i>Create project</i>
Navigation	Board · Issues · Projects · Planning · Dashboards · Reports · People
Create	Opens the Create issue dialog
Search	Quick search across issues and projects (press <code>/</code> from anywhere)
Bell	Notifications, with an unread badge (refreshes every 30 s)
Avatar	Account menu: name and role, <i>Email notifications</i> switch, <i>Log out</i>

Project switcher

The screenshot illustrates the JiraTech interface. At the top, the navigation bar includes the JiraTech logo, a project switcher dropdown (currently showing 'PAY Payments Platform'), and navigation links for Board, Issues, Projects, Planning, Dashboards, Reports, and People. A '+ Create' button is also present. A search bar and a user profile icon are on the right. The main content area displays a Kanban board with three columns: BACKLOG (4 items), IN PROGRESS (5 items), and CLOSED (6 items). A 'Project switcher' dropdown menu is open on the left, showing a list of projects: PAY Payments Platform (selected), MOB Mobile App, and SPORTS Sports Development. Below the list are options to 'View all projects' and '+ Create project'. The board contains various issue cards, each with a title, a status icon, and an assignee. For example, in the BACKLOG column, there is an issue 'Call the ML scoring service on every deposit' assigned to PAY-15. In the IN PROGRESS column, there is an issue 'Digital wallets: Apple Pay and Google Pay' assigned to PAY-1. In the CLOSED column, there is an issue 'Refund flow in the back office' assigned to PAY-19.

Project switcher

Quick search — type a key or words; matching issues appear as you type, and *Search all issues for "..."* opens the full Issues page with that text.

The screenshot shows the Jira Payments Platform Board with a search bar at the top right containing the text "apple". A dropdown menu is open, displaying a list of issues related to "apple". The issues are:

- PAY-6 Register Apple Pay merchant ID and domain ...
- PAY-8 Apple Pay button component
- PAY-1 Digital wallets: Apple Pay and Google Pay
- PAY-4 Pay with Apple Pay on the web checkout
- PAY-10 E2E tests for Apple Pay happy path

Below the search bar, the board is divided into four columns: BACKLOG (4 items), TO DO (7 items), IN PROGRESS (5 items), and CLOSED (6 items). Each column contains a list of issues with their respective status, assignee, and priority.

Quick search

Account menu — turn email notifications on or off (in-app notifications are always on).

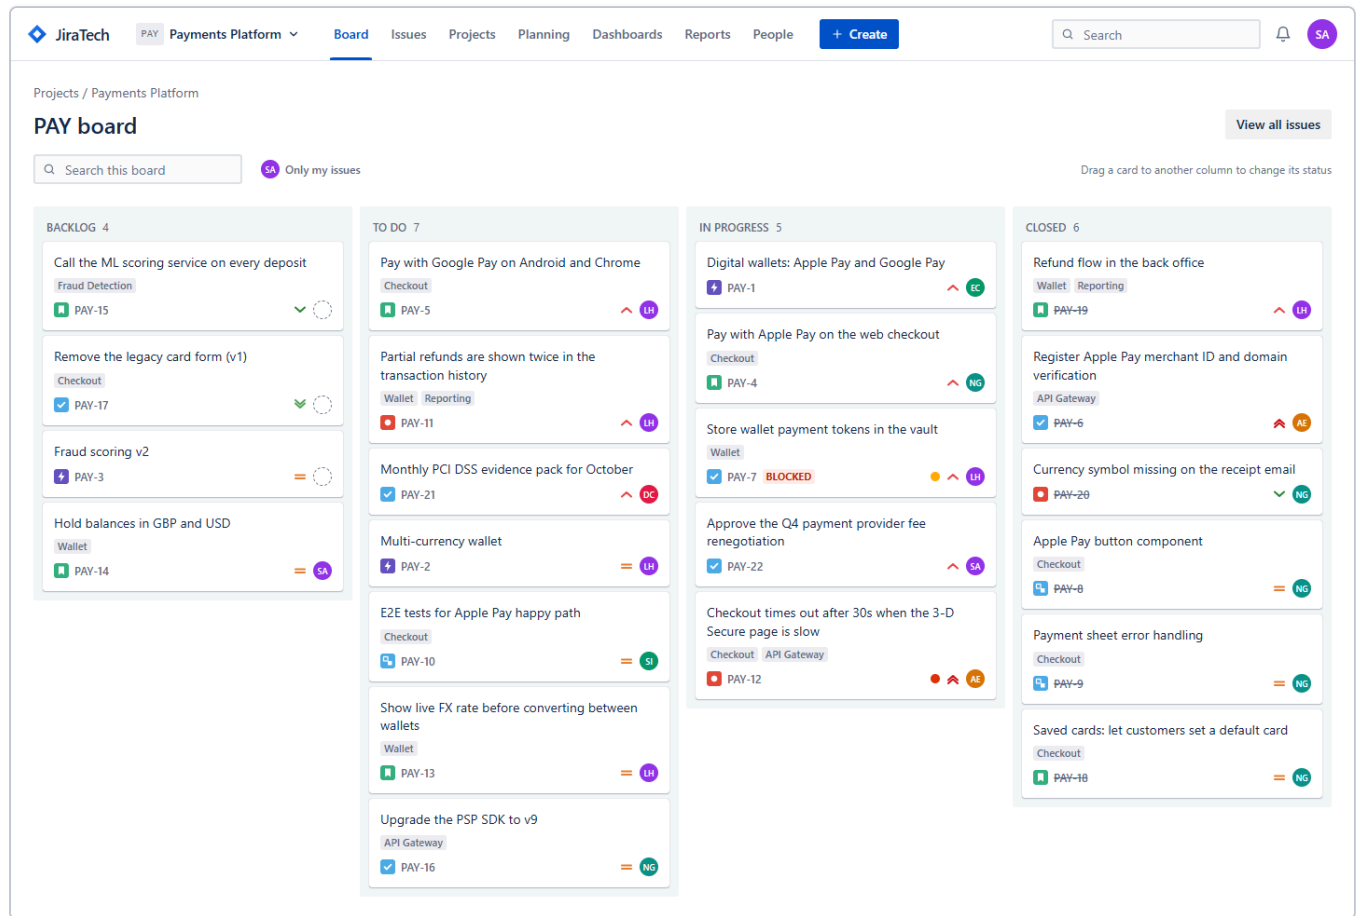

The screenshot shows the Jira Payments Platform Board with the account menu open in the top right corner. The menu displays the user's name "System Admin" and email "admin@jiratech.local". Below this, there is a toggle switch for "Email notifications" which is currently turned on. The toggle is labeled "For assignments, mentions and issues you watch". At the bottom of the menu, there is a "Log out" button.

The board itself is divided into four columns: BACKLOG (4 items), TO DO (7 items), IN PROGRESS (5 items), and CLOSED (6 items). Each column contains a list of issues with their respective status, assignee, and priority.

Account menu

5. Board

The home page is the Kanban board of the current project.

Board — PAY project

- One column per workflow status, with a count in each header.
- Each card shows summary, components, issue type icon, key, priority icon, assignee avatar, and a **BLOCKED** flag or RAG dot when set. Closed issues have their key struck through.
- **Drag a card to another column** to change its status. Only moves allowed by the workflow are accepted; dropping into a Done column asks for a resolution first.
- **Search this board** filters cards by text; **Only my issues** shows issues assigned to you.
- **View all issues** opens the Issues page for the project.

The SPORTS board looks the same, but with the SPORTS issue types and @team components:

6. Creating issues

Click **Create** in the header (or *Add child issue / Create sub-task* from an issue).

Create issue

Field	Notes
Project *	Only projects where you are a Member or Administrator
Issue type *	All types; the list of valid parents depends on the type
Summary *	
Epic name	Shown for epic types
Description	Rich text: bold, italic, strikethrough, inline code, heading, lists, quote, code block, link, @ mention
Parent	Type-ahead search for an epic or story. Required in SPORTS-convention projects for level-2 types
Assignee, Priority	Priority defaults to Medium
Labels	Pick existing labels or create new ones inline
Original estimate (hours)	Used by time tracking and the PI scheduler
Components, Fix versions	From the project's settings
Create another	Keeps the dialog open for the next issue

Mentioning someone with @ in the description notifies them and adds them as a watcher.

7. Issues: search, JQL, filters and bulk changes

The **Issues** page is the search hub.

Basic search

The screenshot shows the Jira Issues page for the 'Payments Platform' project. The left sidebar contains filters: 'My open issues', 'Reported by me', 'All issues' (selected), 'Open issues', 'Done issues', 'Updated recently', 'SAVED FILTERS' (Created this week, My open work, Release blockers), 'SHARED WITH YOU' (MOB 5.2 scope, PAY blocked or at risk, SPORTS defects). The main area has a search bar and dropdowns for Project (PAY), Type, Status category, Priority, and Assignee. A 'Switch to JQL' link is present. The issue list has columns: Type, Key, Summary, Assignee, Reporter, Priority, Status, Created, and Updated. Issues are listed with their keys (e.g., PAY-21, PAY-22, PAY-12) and summaries (e.g., 'Monthly PCI DSS evidence pack f...', 'Approve the Q4 payment provide...').

8. Issue detail

Open any issue at `/browse/KEY-123` (from the board, search, a link or a notification).

The screenshot shows a Jira issue detail page for the issue titled "Pay with Apple Pay on the web checkout". The page is part of the "Payments Platform" project, specifically under the "PAY-1" epic. The issue is currently in the "In Progress" status.

Header: The top navigation bar includes the Jira logo, the project name "Payments Platform", and various navigation tabs like Board, Issues, Projects, Planning, Dashboards, Reports, and People. A search bar and a user profile icon are also present.

Issue Title and Actions: The issue title is "Pay with Apple Pay on the web checkout". Below the title are three quick action buttons: "Attach", "Add child issue", and "Link issue".

Description: The description states: "As a customer on Safari, I want to pay with Apple Pay so I don't have to type my card details." It also lists acceptance criteria: "Button only shows when the device supports Apple Pay", "Payment sheet shows the merchant name and the total", and "Declines show the same error message as cards".

Child issues: A section titled "Child issues" shows a progress bar at 67% done. It lists three child issues: "PAY-8 Apple Pay button component" (CLOSED), "PAY-9 Payment sheet error handling" (CLOSED), and "PAY-10 E2E tests for Apple Pay happy path" (TO DO).

Linked issues: A section titled "Linked issues" shows two linked issues: "MOB-3 VoiceOver reads odds and selections on the bet slip" (QA) and "PAY-12 Checkout times out after 30s when the 3-D Secure page is slow" (IN PROGRESS).

Blocked by: A section titled "is blocked by" shows one issue: "PAY-6 Register Apple Pay merchant ID and domain verification" (CLOSED).

Activity: The "Activity" section shows a list of comments. The first comment is from Nikos Georgiou, stating that the brand name fix is deployed to staging and asking if it can be signed off. Subsequent comments from Katerina Antoniou, Sofia Ioannou, Elena Christodoulou, and Nikos Georgiou discuss the deployment, the merchant ID, and the payment sheet.

Details: The "Details" section on the right provides metadata for the issue. It includes the Assignee (Nikos Georgiou), Reporter (Katerina Antoniou), Priority (High), Labels (frontend, q4-goal), Components (Checkout), Fix versions (2.6.0), Affects versions (None), Epic (PAY-1 Digital wallets), Estimate (24h), Time tracking (10h 30m logged, 24h remaining), Blocked (No), Customer / brand (None), and Severity (None).

Watchers: The "Watchers" section shows five people watching the issue: System Admin, Elena Christodoulou, Nikos Georgiou, Sofia Ioannou, and Katerina Antoniou. There is a "Stop watching" button.

Issue detail

Header — breadcrumbs (project / epic / issue), watch button with watcher count, copy link, and a **...** menu (Log time, Create sub-task, Link issue, Copy link, Delete).

Main column

- **Attach / Add child issue / Link issue** quick actions. Attachments can be downloaded and deleted.

- **Description** — rich text, edited in place.
- **Child issues** — list with statuses and a progress bar (% of children done).
- **Linked issues** — grouped by link type: *blocks* / *is blocked by* / *depends on* / *relates to*. Links can cross projects; add with type-ahead search, remove from the list.
- **Activity** — three tabs:
 - **Comments** — add, edit and delete; supports rich text and `@mentions`.
 - **History** — every field change, transition, link and attachment, with old → new values.
 - **Work log** — time logged by each person with a note.

The screenshot shows the JiraTech interface for the 'Payments Platform' project. The main content area displays a list of issues, including 'PAY-9 Payment sheet error handling' (CLOSED) and 'PAY-10 E2E tests for Apple Pay happy path' (TO DO). Below this, the 'Linked issues' section shows 'relates to' links to 'MOB-3 VoiceOver reads odds and selections on the bet slip' (QA) and 'PAY-12 Checkout times out after 30s when the 3-D Secure page is slow' (IN PROGRESS). It also shows 'is blocked by' link to 'PAY-6 Register Apple Pay merchant ID and domain verification' (CLOSED). The 'Activity' section is active, showing a list of recent actions: 'Andreas Eracleous added a link: relates to PAY-12' (4 days ago), 'Katerina Antoniou added a link: relates to MOB-3' (16 days ago), 'Nikos Georgiou changed the Status' (17 days ago, To Do → In Progress), 'Nikos Georgiou changed the Status' (22 days ago, Backlog → To Do), 'Katerina Antoniou changed the Assignee' (25 days ago, None → Nikos Georgiou), 'Elena Christodoulou added a link: is blocked by PAY-6' (25 days ago), and 'Katerina Antoniou created the issue' (27 days ago). The right sidebar shows issue details like 'Estimate: 24h', 'Time tracking: 10h 30m logged, 24h remaining', and a list of 5 watchers: System Admin, Elena Christodoulou, Nikos Georgiou, Sofia Ioannou, and Katerina Antoniou.

Issue work log tab

Side panel

- **Status button** — shows the current status; the dropdown lists only transitions the workflow allows (including *Re-open* from Done). Moving to Done asks for a resolution.
- **Details** — Assignee, Reporter, Priority, Labels, Components, Fix / Affects versions, Epic, Estimate, **Time tracking** (logged vs. remaining bar), **Blocked** flag, plus the project's **custom fields**. All fields edit in place.
- **Watchers** — list, *Watch / Stop watching*, *Add watcher*.
- Created / updated timestamps.

Opening an issue marks its notifications as read. Deleting an issue removes its comments, history, links, work logs and attachments; issues with children must have them moved or deleted first.

9. SPORTS features on an issue

In the SPORTS project, issues carry extra fields and actions.

Odds feed drops Asian handicap markets after a reconnect

Description
After the feed reconnects, AH markets stay suspended until a manual resync. Seen 3 times this week during peak.

Linked issues

Reconnect handler is skipping the AH snapshot because of a stale sequence number. Fix in progress.
Delete
- AD** Alexander Deriabin 3 days ago
Happened again at 20:14 during the derby. Resync fixed it within 2 minutes but we were suspended for 9 minutes before anyone noticed.
Delete
- MP** Maria Papadopoulou 3 days ago
Raised the priority. I've also created a task for alerting so we notice faster next time.

SPORTS defect with incident handling

RAG status — Green / Amber / Red selector. Amber and red issues appear under *At risk or delayed* on the dashboard.

SPORTS custom fields — Priority Justification (YBET / Critical / Standard), [pts] Customer, Customer Account, [pts] Target Version/s, Progress Status, Reopen Count (maintained automatically), CACHED Inherited Account. Projects can define their own custom fields (text, number, select, version).

Incident handling (Defects and Tasks) — the *Incident handling* section offers:

Action	Effect
Escalate to @TEAM	Adds that team component to the issue

Planning

- **PI cards** — each program increment with status (Planning / Active / Completed), date range, issue and sprint counts. Click to select.
- **Sprints** in the selected PI.
- **Issues in the PI** — type, key, summary, status, estimate and scheduled dates.
- **Run scheduler** — orders the PI's issues by priority and type, respects *depends on* links (an issue starts after what it depends on), and fits them into team capacity (by component; 40 h default per team; missing estimates count as 8 h). It writes scheduled start/end dates and shows a summary: *Scheduled*, *Unscheduled*, and *Constraint violations* (e.g. "insufficient capacity for team @DB").

Running the scheduler updates the scheduled dates on the PI's issues.

13. Dashboard

Plan-progress dashboard for the current project.

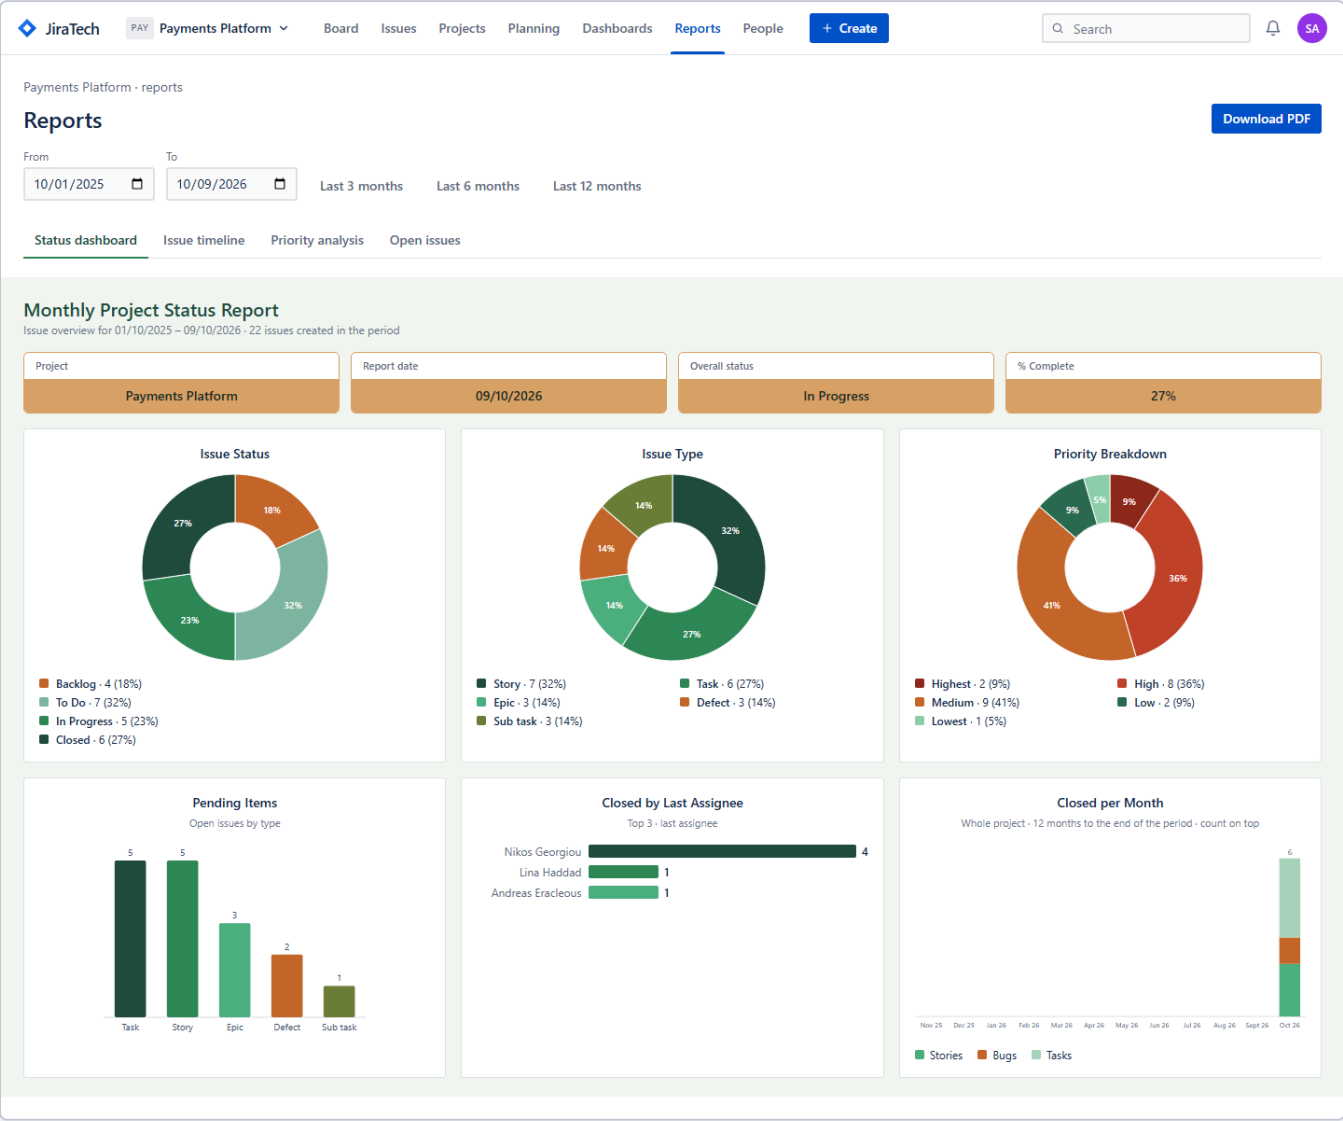

Dashboard

- **Totals** — total issues, in progress, closed, completion %.
- **Issues by status** and **RAG status** bar charts.
- **Blocked** — issues flagged as blocked, with assignee.
- **At risk or delayed** — amber and red issues.
- **Recent escalations** — latest incident actions (shown when there are any).

14. Reports

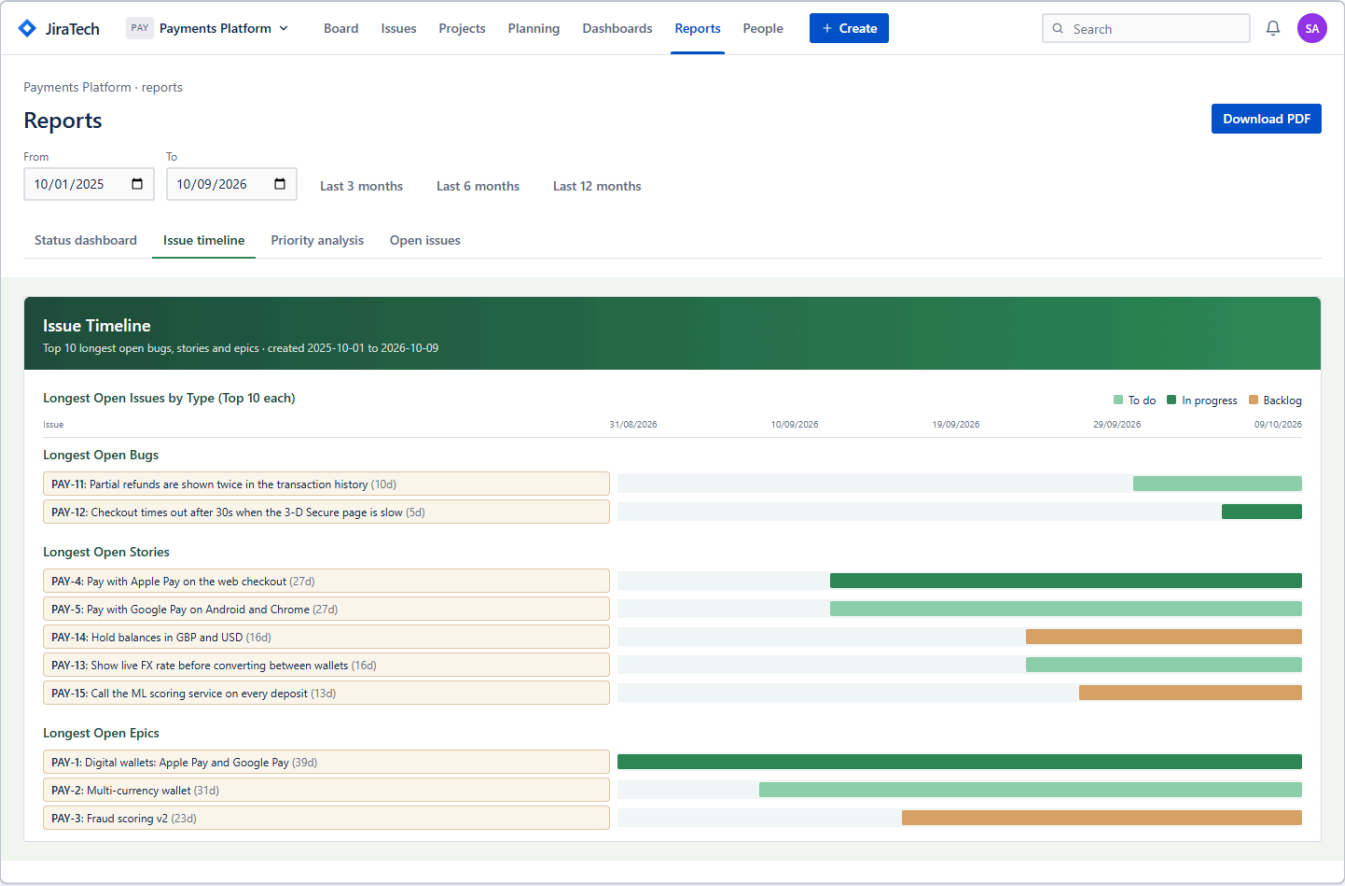

Four management reports for the current project over a chosen period (From / To dates, or *Last 3 / 6 / 12 months*). **Download PDF** produces an A4 PDF with all four reports, each starting on a new page.

Status dashboard — Monthly Project Status Report: project, report date, overall status, % complete; donuts for issue status, type and priority; pending items by type; closed by last assignee; closed per month (stories, bugs, tasks) over 12 months.

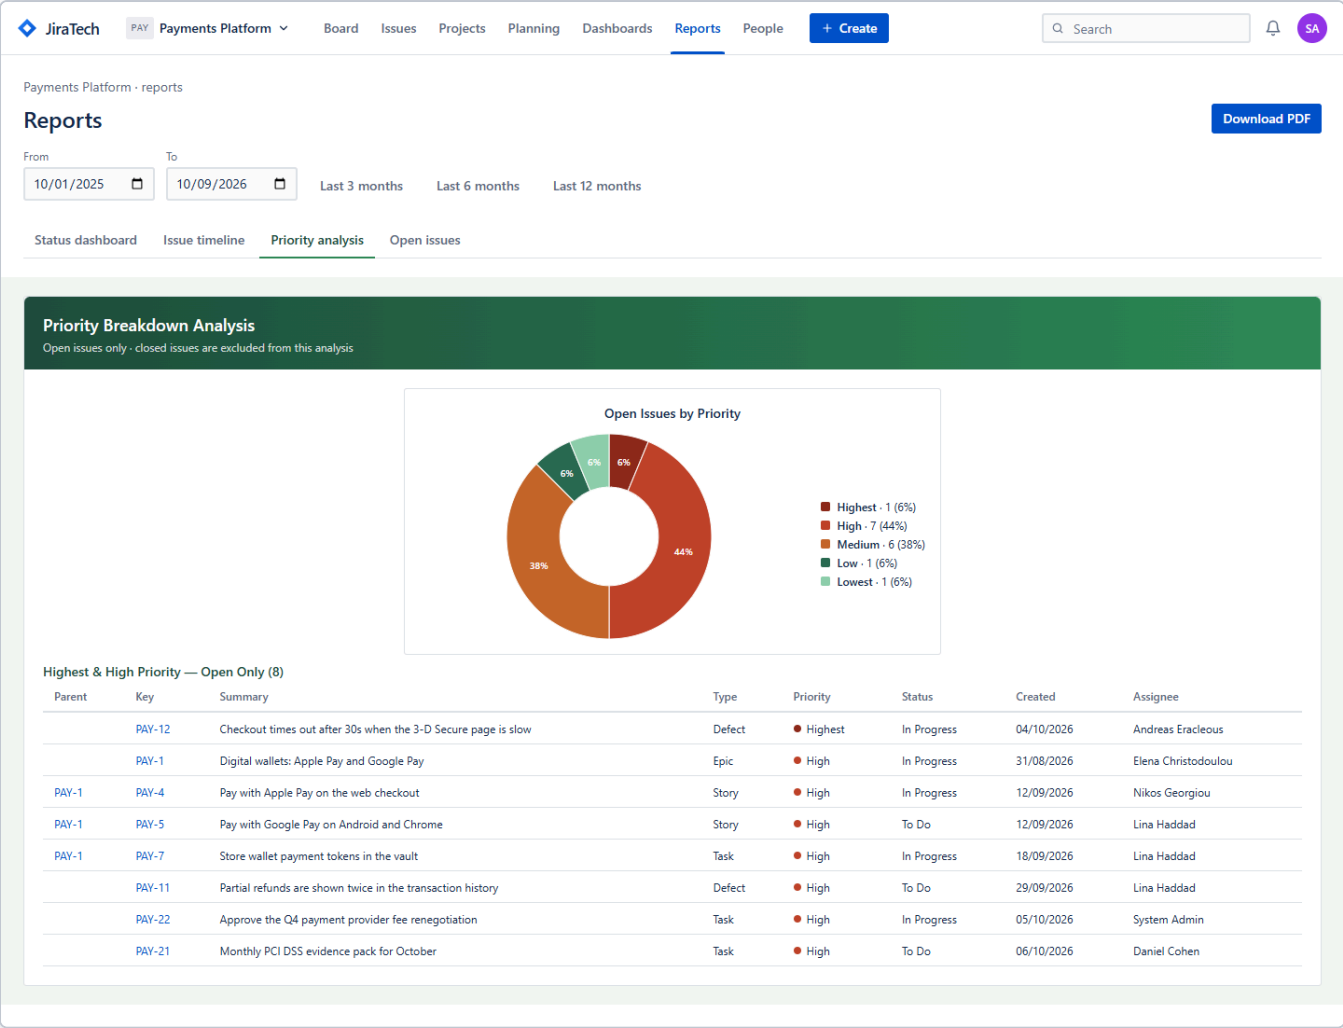

Reports — status dashboard

Issue timeline — the 10 longest-open bugs, stories and epics, drawn as bars from creation date to today, coloured by status category.

Reports — issue timeline

Priority analysis — open issues by priority, plus the full list of open Highest and High issues.

Reports — priority analysis

Open issues — every open issue in the period with key, summary, type, status, priority, assignee and age.

NG Nikos Georgiou	nikos@jiratech.local	DEVELOPER	Edit
SI Sofia Ioannou	sofia@jiratech.local	QA SPECIALIST	Edit
SA System Admin	admin@jiratech.local	ADMIN	Edit

People

Everyone who can sign in and be an assignee, reporter or watcher. Search by name or email. Administrators can **Add person** (full name, email, password, role) and **Edit** people (including resetting the password).

Global roles: Admin, Developer, Merge Master, Product Manager, Product Owner, Program Manager, Project Manager, QA Specialist, Release Manager, Scrum Master, Team Lead. **Admin** administers every project and manages people; **Project / Program / Product Manager** can also create projects; the other roles describe the person's job. What someone can do inside a project is set by their **project role** (see section 17).

16. Notifications and email

Notifications

You get...	When
Assigned	Someone assigns an issue to you
Mentioned	Someone @mentions you in a comment or description
Watching	Someone adds you as a watcher
Commented / Status changed / Updated / Deleted	An issue you reported, are assigned to or watch changes

- **Direct** tab: assignments, mentions, watcher invitations. **Watching** tab: everything.
- *Only show unread*, *Mark all as read*, and per-item read/unread.
- You're never notified about your own actions; each change produces at most one notification per person.
- Each notification is also emailed unless you switch off *Email notifications* in the account menu. Without an SMTP server configured, emails are written as `.eml` files to `backend/mail-outbox/`.

17. Permissions reference

Each project has **members** with a role, plus **general access** for everyone else.

Project role	Can
Administrator	Everything below, plus project settings, people, versions, components, custom fields, workflow, and deleting any issue
Member	Create, edit, assign, link and transition issues; log work; delete issues they reported
Viewer	Browse, comment and watch

General access	Everyone who isn't a member...
Open	is a Member
Limited	is a Viewer
Private	can't see the project at all

Global admins and the project lead always administer a project. Search, quick search, boards, links and notifications only include what you can see.

18. JQL reference

```
project = SPORTS AND status != CLOSED ORDER BY priority DESC
assignee = currentUser() AND type IN (Story, Bug)
text ~ "login" AND updated >= -7d
labels IS EMPTY AND (priority = Highest OR priority = High)
```

Operators	= != ~ !~ > >= < <= IN NOT IN IS [NOT] EMPTY , combined with AND / OR / NOT and parentheses
Functions	currentUser() , now() , startOfDay() , startOfWeek() , startOfMonth()
Dates	2026-01-31 , "2026-01-31 14:00" , or relative -7d , -2w , -4h
Sorting	`ORDER BY field ASC

19. Capabilities available through the API only

These backend features exist but have no screen yet; they can be called through the REST API:

Feature	Endpoint
List release candidates of a Release Epic	GET /api/releases/:epicId/candidates
Create a release candidate	POST /api/releases/:epicId/candidates
Sign off the Golden Master (closes the RC and copies its fix versions to the Release Epic)	POST /api/releases/candidates/:id/sign-off
Generate release notes (delivered features and bug fixes for the epic's fix versions)	GET /api/releases/:epicId/notes
De-escalate / Refuse an incident	POST /api/incidents/:id/escalate with action

The full endpoint list is in the project [README](#).

20. Screen index
